                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a method of inhibiting tumour growth comprising administering to a human a vascular endothelial growth factor receptor (VEGFR) antagonist and epidermal growth factor receptor receptor antagonist. The method is useful for inhibiting tumour growth. The present sequence is used in the exemplification of the invention.

The invention relates to a novel isolated human antibody or its fragment binds selectively to KDR. An antibody of the invention has cytostatic activity, and may have a use in gene therapy. The antibody is anti-KDR antibody. The antibody is useful for preparing a composition for reducing tumour growth and inhibiting anislogenesis. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Η,

19803401-AAS03535 represent anti-adipocyte monoclonal antibody heavy and light chain coding sequences of the invention. The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the fat mass of an obese patient or the antibody can be used as a therapeutic itself.

Antibodies binding specifically to adipocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and used in methods of diagnosis in human surface of an adipocyte to detect or determine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an adipocyte sin a cell or tissue sample. The antibodies can be used as an adipocyte seans of treatment for obese patients other than undergoing surgery to remove excess fat. Antibodies for different types of fat deposits can also be produced e.g. intra- abdominal fat associated with

catalyzes reaction involving target substrate by display-less library screening.
```

Example 4; Page 97; 98pp; English

The invention comprises a method of obtaining a bacterium containing a nucleic acid encoding a binding protein capable of binding a target ligand, or a nucleic acid encoding a catalytic protein that catalyses a reaction involving a target substrate. The method of the invention allows the isolation of a cell expressing a nucleic acid encoding a binding protein capable of binding a target ligand, and consequently the isolation of the nucleic acid encoding a binding isolation of the nucleic acid. The binding protein produced by the method of the invention is useful in determining the structure of a target ligand. The method of the invention is useful for the de novo isolation of antibodies from large repertoire libraries and for monitoring production during protein manufacturing. The method can also be used for monitoring production of a particular byproduct of a biological reaction. The present DNA sequence encodes the dig3 scFv antibody heavy chain which is used in an example of the invention

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
